Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-8 and 17-20, drawn to a method for determining if the data link is idle, if so, identifying the data flow associated with the highest score in the score card, classified in class 370, subclass 238.
 - II. Claims 9-16, drawn to a queue manager coupled to the queues and configured to dequeue the data from the queue, classified in class 370, subclass 413.
2. The inventions are distinct, each from the other because of the following reasons:

Invention I and II are related as subcombinations disclosed as usable together in a single combination. In the instant case, invention I has separate utility such as in a system lacking the method for a queue manager coupled to the queues and configured to dequeue the data from the queue. See MPEP § 806.05(d).
3. These inventions are distinct for the reasons given above and the search required for each Group is different and not co-extensive for examination purpose. For example, the searches for the two inventions would not be co-extensive because these groups would require different searches on PTO's classification class and subclass as following:
 - (a) the Group I search (claims 1-8 and 17-20) would require use of search **class**

370, subclass 238 (not require for the invention II).

(b) the Group II search (claims 9-16) would require use of search **class 370, subclass 413** (not require for the invention I).
